Johannes Wolf Kirchweg32 D 66133 Saarbrücken

Mean opinion on the report:Saarbrücken, the 26.03.2010

"" Experts warn Stammzelltherapie against Parkinson""

published on www.vbio.de/Informationen

and through a newsletter that night turn no. 109 was attached to the Parkinson from July 2009.

Report 1Of revised report, 26. March 2010

It write anonymous experts about Johannes Wolf:

JOHN WOLF

is the Member of the dPV, Saarbrücken, regional area.

2 Years successfully, in the XCell Center Cologne, adult stem cell transplants treated with was, as well as in the Werth Parkinson Center Valencia with PBS (peripheral brain stimulation). See www.Wolf-SB.de

Registered as a journalist in the information service science with personal access.
Subscriber of intelligence doctors and German medical journal newspaper.

The fun part:

Here a play of written article and others.

"... Some Parkinson patients purchase risks take this and treatment even"

"benefit of 73 years Johannes Wolf from Saarbrücken example."

1. Wolf is now again as allegedly first successfully treated patients in Germany.
2. Motorcycle ride and also one
3. Initiative started propagated the new therapy against Parkinson's.
4. To request it was closed.
5. He has**but**"up a Web page ([click here](#)) where he is on improving his health pleased."

Here my opinion.

1. It should play no role whether I am the first successfully treated patient. **Approximately 1600** patients which are suffering from Parkinson's disease treated. except for me are still
2. ... and ride motorcycles. Landline is that I like to do. Despite my high age I successfully visited R. tempest in Saar bücken driving school and completed a HARLEY security training abroad in April 2009. The Harley Davidson - "" Certificate - Academy of Motorcycling"above." 2009 Sommersaison end I have completed 4.100.00 km and it was fun to experience nature as close and direct.

There is therapy for me. I can say I'm while driving on the best constructive ideas.

3. The initiative started by me to indeed promote Parkinson new therapy against disease. The information service science or publications in the press release of the Berlin Brandenburg Academy of Sciences of breakthrough advances in stem cell therapy, including form the basis for this.
4. **It is the false**, the I me to request closed showed. I was asked by any of the anonymous researcher. It has made no contact with me.

Ask researchers to the anonymous.

Is it true that there are successful therapies with adult stem cells for decades? Is it true that biological research with iPS is possible, be therapies to patients with adult stem cells?
Is it true that in the German acupuncture magazine issue 02 / 2002 a new therapy presented by implant acupuncture by Dr. Werth and the effectiveness of this treatment for disease Parkinson has been shown by several studies (including by Prof. Dr. Dr. Schmidt).

5. Obviously you want to create but the impression that the patient in his reporting is Wolf unseriös or something tells itself. The opposite is the case, the DPV and the DGN vehemently deny Anerkennung of other non medikamentöser therapies. The doctors attached to these associations seem to know more of the hippokratischen oath stored by them. At least call in when the treatment of Parkinson patients not to.

The story in my homepage is true how it in the absence of me and how is my condition is.

I've done this alone but with my betreuenden me doctors, Mrs Dr Med Annette GEIGER small Saarbrücken and the neurologists Dr Med Nikolaus RAUBER Saarbrücken, which have my full confidence.

Corresponds to the here mentioned Web page content / reports which are available in written form is based on findings and KKH Word for Word.

It is clearly visible the content of my website as relevant recognizedis because can not **bewhat not be allowed**.

In particular, there are reports/results stationary residence in the hospitals:
Stem cell therapy and the peripheral brain stimulation by Werth,.

Clinic for nuclear medicine, University of Homburg Saar, of 10.10.2007, Prof. Dr. Dr. C. M. Kirsch.
SHG Neurol. Clinic Saarbrücken 12.02.2008, chief physician Dr Med Vaterrodt.
Neurol. and Polyclinic Großhadern of the 22.04.2008 PD Dr Med K. Bötzel.
Neurol. Hospital Munich 22.12.2008, Prof. Dr Med A. Ceballos Baumann.
Tübingen University Hospital Neurology of the 23rd 30.06.2009 Prof. Dr. Gasser.
XCell Center Düsseldorf, Neurology, 16 19.12.2009, Prof. Dr Med Dr. h. c. Nils Haber land.
Werth Parkinson Center, Valencia the 23rd 25.02.2010, Dr Med Ulrich Werth.

This**Facts**are a reality of scientists, so the professors and doctors, signed, where I patient after transplantation.

**Who wants to doubt or know it even better?
Perhaps the anonymous experts?**

These have shown only negative everything in the report, whether it is Jo... Is the Wolf or the XCell Center.

It is fully in keeping with the pharmaceutical industry. It is identical whether the MP patient Jo. Wolf and additional 1600 patients suffer or not.

Undisputed is the enormous effects are.

Lists information for patients with purchase of medicine on each package ca. 20-25 to read possible side effects...

If I remember me, what meant for me.

In my case it was 21 tablets last 14 tablets per day before the stem cell transplantation. That is an insult with all the consequences in the long term for the patient.

Who deliberately negative is the XCell Center stem cell therapy and the peripheral brain stimulation of Dr. Werth as happened here is far entschwinden of reality and to not know that it MP daily worse absence the patients through the use of pharmaceutical products and their part very sustainable side effects. Thus, he defended his old Besitzstände.

The previously treated patients from the XCell Center and the Werth Parkinson Center not only roughly comparable serious adverse reactions occurred. Currently both therapies considered justified by scientific studies, free of side effects. These therapies are no tablets and no desperate future.

The XCell Center in Germany; the only Institute in Europe all required licenses after German Rech of German regulatory agencies for stem cell transplantation has been granted.

The XCell Center is subject to very strict controls.

All e must therapeutic practices before their application at the German licensing authorities declared and ZERTIVIZIERT.

They undergo even ¼ annually strict controls.

The XCell Center is one of the strictest controlled private institutes in Germany at all and does - proven - best quality therapy also in Germany.

Plain text:

It concerns million euros which will implement the pharmaceutical industry and the **Health insurance** pay as the world champion.

Do the grounds: because it is in the pharmacopoeia to inside. ??

An example:

Are my home page in the report "" 1 year after stem cell treatment"" lists the costs. For medicines, I have taken prior to the stem cell treatment.

14 Pills per day for: 771,77 € per month = x 12 months **9.261,24 € per a.**

This is an even lower amount compared to other patients.

The whole x 23,000 self-help groups members = 213.008.520,00 €--alles peanuts?

This peanuts are paid members of the health insurance contributions!

And because it is in the pharmacopoeia therapies be paid which only aggravate the disease in most patients after each hospital stay. See report of the family p. from Zurich.

The IMASGMP have before all the relevant reports and can be viewed at any time.

It is not disputed that without the pharmaceutical industry and the research is nothing.

This should be no reason the XCell Center or Dr Med To attack the opposite Ulrich Werth.

The pharmaceutical industry should work together with scientists from the stem cell research, the therapist and other creators of innovative treatments and not the earlier ignore. Should focus this conspicuously not highest possible profit, but the benefit of patients.

The IMASGMP offers their cooperation.

Close networking industry and research accelerates the implementation of key findings
Applications for the patient.

To all readers of this report:

Please share with the IMASGMP under www.wolf-sb.de which you have experience with your neurologists in a clinic, and with the XCell Center and the Werth Parkinson Center. Thank you

JO. WOLF
