

My status after 3 years Parkinson treatment with adult stem cells

Was 23. March 2010

My facts as I experienced the therapy.

1. Treatment.

26Th 2007 10 million were me in the XCell Center Cologne Units stem cells implanted.

2. Treatment.

On 22.Februar 2008 in turn 10 million Stem cells.

After this I 4 weeks very slow so out schleichend have issued following drugs.

Amantadine 200 / 100	3 x	daily
Levocomp 100 / 50	3 x	daily
Cabaseril 1 mg	2 x	daily
Levodopa carbide Europe 200 / 50 Retard	2 x	daily
Acilect 1 mg	1 x	daily
Comtesse 200	3 x	daily

Total: **14 Tablets daily**

**771,77 € Per
month**

Cost: **12 Months =
9.261,24 €**

Then I was schmerz-and drug-free.

Parkinson typical symptoms, me on the inexorable way to decline with all its consequences that how known when Parkinson's disease, were directly after the treatment no longer exist:

- No slight tremor more.
- No pain.
- The feeling to have painful, lead legs was away.
- No dyskinesia (strong spasms) at night; in the legs.
- Schwindelgefühle after getting up when the Treppensteigen were away.

At night 3-4 x, toilet speed reduced to 1 course or not.

Daily one hour sports: Waldlauf (jogging), walking (hiking) Cycling power, ski run, play tennis, ride a motorbike, again give pleasure.

Lately, I note that I increasingly abfedernd abrolle feet at work.
Because drugs no longer cause side effects, car travel become easily and without fatigue.
The same applies for the newly acquired bike to.

Therefore it is possible with other transport me a car / motorcycle ride no longer schwindelig
and thus greater travel.

Teeth cleaning and knöpfen the small buttons at the upper shirt is without problems.

Still, I can say how the fresh water and not only this again taste me, namely sweet.

As a result,

after **1.Therapie** on 26. July 2007, I have issued me Saarbrücken on 28.Januar 2008 to
investigate in the Neurologic Klink, see the report on my homepage.

From the report does not indicate that stem cell therapy negative was held.

In addition was a psychological test. determine

quote: ... *.Im Parkinson patients than Mr WOLF showed rather extremely good and no longer
steigernde excellence.*

For the 2.Therapie on 22 February 2008, I went myself to the **28 March 2008, further
investigation to Munich (see report in my homepage).**

Neurologic found

quote:... *he freulicherweise has proved the stem cell therapy as very positive, since they then
found a relief of all symptoms had.*

*I can only confirm there is a very good condition with very slight expression language
resistance Parkinson symptoms and freezing*

I have in writing corresponds with the FRAUNHOFER Institute, and with Mr Prof. Dr. Dr.
KIRSCH Homburg, matter research with **adult stem cells**.

Typically the answers are:

1. it is still too little tested.
2. Adult stem cell therapy created tumours.
3. Fundamental rejection.

My answer such t. from experience:

1. How should a test be if it is rejected in General.

Nachgewiesener - masses is so that the stem cell therapy or peripheral brain stimulation (PBS) acts by Werth in the PBS is scientifically demonstrated effectiveness for Parkinson's research and publications.

2. It is appalling, how little some professors or doctors about treatment with adult stem cells or the PBS (want to) know. The DPV and the DGN reject all non medikamentösen therapies and describe as ineffective, contrary to the hospital or medical reports. You have scientific studies out, want to know nothing about it and also deliberately say the untruth. You take it billigend in purchase millions Parkinson patients from around the world suffering not only from this terrible disease, but also to the side effects caused by the daily medication.

You be knowingly against the **geschworenen of them once hippokratischen oath:**

Best of my knowledge and power, I will do me always for the benefit of the people, to obtain their health or restore.

Because they are sponsored by the pharmaceutical industry and not qualify.

3.

The fact is:

- Hope the sick people, **r XCell Center helps n u!**
- Therapy in the XCell Center take senior doctors and management for the stem cells no patients a guarantee for a successful treatment.
- If still there are 2 symptoms of easier expression currently at me, all no longer existing my quality of life have improved but significantly.
- I personally am very satisfied and drug-free treatment with the result.

4. Treatment in the XCell Center

16.12.2009 19.12.2009 - inpatient treatment in Düsseldorf.

- direct implantation of stem cells in the brain due to the 2 still easily existing symptoms freezing and language flow disorders.

5. Behandlung in the - Unna ISST rehabilitation centre

- Vom 24. 01. 2010 to 28.01.2010
- Neuro cell stimulation therapy.
- See : [www.isst - unna.de](http://www.isst-unna.de) and www.faceformer.de
- In the Anschluss to the implantation I was Center for rehabilitation patient in the Unna. It was the best neuro cell stimulation treatment of Mr Dr Med Berndsen and Mrs Sabine Berndsen, specifically for each patient performed is.

6. Treatment in the Werth Parkinson Center.

22.02.2010 24.02.2010 outpatient treatment in Valencia.

- Complement to December 2009 recent stem cell therapy I subjected me to handle of these two symptoms (prophylaktisch) peripheral brain stimulation by Werth by a Titan micro implants in the pinna eingepflanzte.

Was 24.03.2010

Is doing well I.

Commonplace I detect, can free as I thought and action. The language flow disorders are slightly declining and the freezing as well Every day I am pleased about the progress I notice when the slow decline of the remaining symptoms.

Jo. Wo.
