

Persönlich's letter Saarbrücken, 20.Mai 2008
revised in March 2010

To my personal friends

To my relatives

To my skiers and hiking friends

To my neighbors

To my dancesport friends

To my tennis sports friends

To all dPV members of self-help group Saarbrücken

and all good people who worked with me and by their affection and confidence have helped me to endure my far incurable disease.

Morbus Parkinson since 2003.

First patient in Germany, with endogenous (adult) stem cells on the 25th. July 2007 treatment was.

As a result, The patient is (largely) drug-free – that is documented in a medical report, schmerzfrei and free of Parkinson symptoms.

I was on the inexorable way to decline with all the consequences that Parkinson as known encounter's disease.

On the 6. May 2003 my doctors told my Parkinson disease me by results.

The 8. July 2003 Homburg I was diagnosed in a row at the University Clinic suspect of a Parkinson syndrome. A DATScan study conducted for the clarification.

A niederschmetterndes judgment also, for me and any other interested parties.

In plain text:

I saw me towards the total decline as it all such as when Pope John Paul II. have seen and experienced.

I wanted to end definitely in IV treatment level.

After the I me had to resign after a certain period with this disease, I have faithfully promise made at our marriage with my dear woman who has made exemplary and selbstlosen assistance on me: "to be", "in good and bad times for each other as and with my dear family, the seemingly hopeless fight against this damn disease."

My doctors Mrs Dr Med Geiger-Klein and the neurologist Mr Dr Med N. Rauber, have me this exemplary treatment and support.

In my day, I have given me no stop. I have reduced my body weight from 80 kg to 70 kg.

Daily one hour sports 4000 m Waldlauf, or a game of tennis or dancesport with my wife or cycling or hiking or/and mandatory Frühgymnastik were used as a means against this disease I. I have made this challenge.

So I searched every opportunity and used to fight more effectively against this disease in as to make use of the therapies expressed by the pharmaceutical industry on the market.

To learn the status of **adults** stem cell research and their therapies, I have with the Fraunhofer Institute University corresponding clinic Munich, the research of Marburg and other specialist clinics.

With a view to not waste time and miss no opportunity, to be treated, by an adult stem cell therapy, I have visited the University Clinic Marburg discussed Parkinson patients under the direction of Mr Professor Oertel, and explores the disease.

Visit technical meetings I attended, and participate in the 9. World Parkinson day of the World Health Organisation in Luxembourg. Specialised seminars and information events of German Parkinson's Association, organized by the head of the regional group of Saarbrücken, Mr Karl Musielack, I attended also.

Lectures on new approaches to therapy - to adult stem cell therapies - were kept this from Chefärzten from the Saarland and further Germany.

In parallel I me over the Internet at the **iwd** - information research service - inscribed and the German doctors subscribed journal.

All led me to any viable treatment option or no result.

All results were: there are still many years research for a "Erforerlich"clinic-ready"stem cell therapy".

It is noteworthy that when all lectures, trade events, never the men teachers / Chefärzten something about treatment **with adults, i.e. endogenous** stem cells said seminars, Delegiertenversammlungen about how stem cells.

After nächtelangem searching the Internet I made **the xcell Center in Cologne learned over - www.xcell-center.de**, which by body eignen stem cells the Nervenkrankheit treat Parkinson's disease, not cure.

After intensive studies of incoming information such as the German medical sheet of the 16.03.2007 as consulting with doctors from the XCell Center in Cologne and under consideration of the risks I have to deal with my body stem cells eignen firm and they also carry.

This treatment resulted in an enormous success as described in detail in my letter of the 05.10.2007 for me.

The 10.10.2007 DATScan- was made Investigation Department for nuclear medicine, University Clinic Homburg/Saar by Mr Professor Dr. Dr. C. M. Kirsch, with the intention of the 1. Results from 2003 with the latest results of stem cell therapy to compare.

The report clearly shows that compared to the investigation in 2003 a trend decrease of the symptoms is.

The fact is that the stem cell therapy performed with me with endogenous stem cells to my complete satisfaction was successful.

I was (mostly) drug-free 4 weeks - this is documented in a medical report, schmerzfrei and free of Parkinson symptoms.

The typical active Parkinson symptoms - except 2 left survivor freezing and language flow noise - are no longer present.

I thank all who have given me your trust and not excluded me despite my illness.

This expressing special thanks to my Sportfreunde expressed, that have integrated me daily removed performance in sporting activities.

I thank all those who have heard me speak and to strengthen my self-confidence, not have interrupted me.

I thank all those who have spoken with me despite my language flow noise and had patience while I was very fast and unclear it against my will but sometimes or still am.

From the start the Diagnostics of was my biggest interest

Stem cell research, stem cell transplant and genetic research.

PS:

To not always just the traditional and still abklingenden approved Parkinson symptoms must thinking, I have decided to a new perspective, including my whole family.

Together, we are inviting Harley Davidson motorcycle exhibition in Saarbrücken followed, and I was interested in my family for the specific nature, the beauty, the sounds, etc..

Since the 38. KW. 2007 I have enrolled me in driving school storm in Saarbrücken and learn the biking headed by Mr Sturm personally once again.

This driving school is Fahrschüler the first in Germany, the a 72 years, formerly Parkinson health very competently, sensitively and qualified informed.

If teachers Mr R. Sturm, his Fahrschüler, the old Hans Wolf, after the Fahrstunden "" to certify that the old Wolf no danger and road users "representing then a reality is from the perspective of."

It is then: Hans Wolf buys a Harley Davidson and will experience the SOUND members along with other Harley Club.

For questions I am like available.

With kind regards

Your Hans Wolf

PS. Saarbrücken, 10. 03. 2008

The reality has set.

I have as already set out. the Harley Davidson, a ROAD KING purchased, delivered to 01.03.2008 me in Saarbrücken in the sympathy of my friends, acquaintances, neighbors.

PS: Saarbrücken, 26.03.2010

Of the 22.02. -24.02.2010 I was Center in Valencia against the 2 remaining symptoms, the freezing and the language flow noise with the peripheral brain stimulation in the Werth Parkinson (PBS in the pinna eingepflanzte Microimplantate) successfully therapiert.
