**Mean opinion on the report:**Saarbrücken, the 23.03.20103

**"" Experts warn stem cell therapy against Parkinson""**

published on [www.vbio.de/Informationen](http://www.vbio.de/Informationen)  
and through a newsletter that night turn no. 109 was attached to the Parkinson from July 2009.

**Report-2-**Of revised report, 23. March 2010

This position is:

JOHN WOLF

is the Member of the dPV, Saarbrücken regional area.

2 Years successfully, in the XCell Center Cologne, adult stem cell transplants treated with was, as well as in the Werth Parkinson Center Valencia with PBS (peripheral brain stimulation). See [www.wolf-sb.de](http://www.wolf-sb.de)

Registered as a journalist in the information service science with personal access.  
Subscriber of intelligence doctors and German medical journal newspaper.

### **The fun part:**

The XCell Center in Cologne and 2 Parkinson associations warn it attackierten anonymous experts treatment with stem cells from bone marrow, because the scientific basis.

**Missing not.**Left to the reader - **contrary to the hippokratischen oath** - deliberately to.  
Here more information about:

At a press conference of Berlin Brandenburg Academy of Sciences were at the 08. October 2009 with the publication.

"" New ways in stem cell research""

presents groundbreaking progress in the field of stem cell research.

### **The fun part:**

The recipients of the joint press release of the German Parkinson Society and of the German society for Neuroscience, are deliberately against the XCell Center in Cologne informed.

### **Why not for the Center?**

I feel as a patient and more exposed approximately 1600 patients who were transplanted, not lied to me and not Scharlatanerie.

I am fine, as described in my homepage. In this, hospitals are listed by me I have visited after my treatment.

**Medical reports**, it is clear that **No** probabilities shown in the press release ever have hit me.

These **facts** are signed reality of scientists, so the professors and doctors that previously have investigated me as a patient.

### **Who wants to doubt to these facts by German scientists investigated or know it even better?**

### **Perhaps the anonymous experts or press Erklärer?**

I will request anyone anlügen and otherwise, as say, as I am concerned.

This no doubt arise.

The I **MASGMP** initiative with adult stem cell transplants against disease is Parkinson, against the alerts from anonymous experts and science.

Rather, they offer the cooperation with all the motto:

**Together against our archenemy disease Parkinson.**

Without these warnings, it would have been to this correspondence.

The prices of the XCell Center Cologne.  
Why should a secret are therefore made?

The prices are, as it must be a privately controlled Institute. Kostendeckend.

Each of the patients treated today in the Center sometimes tens thousand € uro has saves his health insurance.

If a transplant is paid by patients with 7,500 € or 24,000 €, the health insurance benefits after to eliminating the cost of unnecessary, costly medicine and the treatment of adverse reactions.

The XCell Center needs no hope for the patient to stir up.

The patients who contact the IMASGMP have made all their negative experiences with the therapies paid by the health insurance.

This includes hundreds of messages also worldwide can be presented to prove.

Where clearly say could without the pharmacy to date and to hundreds of thousands with Parkinson disease not live until further notice at all.

**This fact must not necessarily lead to attacks against the XCell Center.**

**The XCell Center in Germany, Europe is "" the only institution"which has received all required licenses granted under German law of German regulatory agencies for stem cell transplant."**

**The XCell Center is subject to very strict checks as private.**

**To be any therapeutic practice before their application at the German regulatory agencies registered and certified.**

**They undergo also quarterly strict controls.**

**The XCell Center is one of the most complies controlled private institutes in Germany at all.**

**Stem cell transplants run according to the guidelines of the patient's Guide to stem cell therapy.**

**And does so in Germany - to whitish best quality therapy.**

**Right is advised that a guarantee of healing are there no can and risks are not excluded.**

And what the quote from the English professional page against the head of the XCell Center Mr Dr Med As C. Kleinbloesem, so you can talk of a terrible intrigue against him, joining none in Germany.

Anonymous experts as a reader of these lines credible do, the XCell Center in Germany illegally exists, so treatment without any authority control, compliance, quality certificates, patients?

It will not succeed them.

The requirements in this case are far too strict as that it would ever to do so, Mr Dr Med To set Kleinbloesem crafts. (All this expression befremdet anyone reading)

Rather, he is an entrepreneur who earned our respect in Germany and is very welcome. As he has in the newly built second clinic in Düsseldorf invested a lot of money and create new jobs.

In addition, leads the XCell Center statistics and creates scientific studies as of approximately 1600 MP is the patients for over 3 years total 3800 treated patients before and after treatment.

A certified quality control has been set up, which documented on scientific basis:

- a patient health image
- what is the success rate
- what side effects that may set

- as the course of disease before and after treatment is, etc.
- the financial statements.

This is approved in a session: "" information for e.g. MP patients ', can be read.

In comparison to cure and not the Ausschließen bahren risks.

The XCell Center helps the patient.

To have confidence, because the quality of life restricts them no side-effects.

Also, you know that the stem cell transplants without risk can be.

The traditional risk is by far not comparable with traditional pills treatment when a stem cell treatment.

A joint press release would be understandable if they would rely on verifiable modern research and evidence.

Note in two messages:

... significant *health risks* facing *may be* the missing value...

... Societies stem cells *probably* doubt this is... not...  
is unhelpful.

This expression *may, probably*, read patient cause what health risks?

Facts that are missing in the reports would convince.

These are mostly elderly, many were service providers expect that ***specifically one therapy*** without if and but.

Press release of anonymous experts reported that the German Parkinson Association join the criticism with 23,000 members, is concept of desired by a Mr called Scharlatanie treatment applied by the XCell Center may.

The reality looks but different.

The 23,000 members expect all no Scharlatanie and no patient belügen the German Parkinson Association nor the XCell Center.

**But they expect that it helps them to get whole as it required the hippokratische oath zweifelnden professors and doctors have placed this damn disease under control.**

It is bad them because the quality of life strip them side effects from the pill therapy

This emerges from hundreds of letters to the IMASGMP.

Selbsthilfegruppe question to 23,000 members of the Parkinson and readers of my lines including the approximately 1600 patients who transplanted with me:

"Join, represented criticism as the information and the press release from the German Parkinson Society, or, can you join my counter argument?" "

Please email me at [www.wolf-sb.de](http://www.wolf-sb.de) your opinion.

Jo. Wolf
